

AI Interview Prep Copilot

Cohort A · Interview Preparation Phase (IRP)

New Age Software Engineering Program · 8 Sessions · 2 Hours Each

8 Sessions	2 Hours Duration per Session	Hands-On Build Format	React + Gemini API Stack	localStorage Storage	Portfolio App Deliverable
---------------	------------------------------------	-----------------------------	--------------------------------	-------------------------	------------------------------

Target Audience

Students who completed the 6–7 month NASE program covering Python, AI/GenAI, prompt engineering, RAG, agents, and LangChain. They use AI coding tools (Antigravity) to build features. No strong web dev background required — all frontend is generated with AI assistance.

Program End Goal

By the end of 8 sessions, students will have built a fully functional, portfolio-ready AI Interview Prep Copilot — a React web app with no backend — that they can live-demo in interviews and explain every AI decision they made, from prompt design to error handling. The app helps students prepare for job interviews using AI-powered features built feature-by-feature across all 8 sessions.

Session-by-Session Breakdown

Session 1 Launch HQ: Build Your AI Interview War Room

- localStorage persistence
- Form-based data entry
- Profile form with 6 fields
- Input validation
- Future navigation layout

Deliverable: Working web app with profile form, save/load from localStorage, and layout for all 7 upcoming AI features

Session 2 Decode Any JD: Make AI Read Jobs for You

- Structured prompt engineering
- JSON output parsing
- App state management
- Result card UI
- Loading + error states

Deliverable: JD Analyzer section: text area → Analyze button → structured result cards (Required Skills, Responsibilities, Difficulty, Top Interview Topics)

Session 3 Know Your Gap: AI-Powered Profile vs. JD Battle Report

- Multi-context prompting
- Reading from localStorage + app state
- Explainable AI output
- Match bands (Strong / Moderate / Weak)
- Risk area identification

Deliverable: Match Report section: matched skills, missing skills, improvement suggestions, and interview risk areas

Session 4 Arm Yourself: Generate 12 Targeted Interview Questions

- Prompt chaining
- Multi-source context building
- Categorised question generation (Technical, HR, Project, Scenario)
- Copy-per-category controls
- Output stored for Session 5

Deliverable: 12 interview questions across 4 collapsible categories with copy and regenerate controls

Session 5 Practice Under Fire: Get Your Answers Scored by AI

- Rubric-based AI evaluation
- Dropdown from Session 4 output
- Score out of 10
- Strengths and missing points
- Improved sample answer + follow-up question

Deliverable: Evaluator feature: question dropdown, answer text area, AI feedback card with score, strengths, gaps, improved answer

Session 6

Never Get Stuck: Build a RAG-Powered Doubt Crusher

- Retrieval-Augmented Generation concept
- In-app knowledge base as JS array
- Keyword-based retrieval
- Grounded AI prompting
- Source attribution display

Deliverable: Doubt Solver section: question input → AI answer grounded in retrieved knowledge note → source note title displayed

Session 7

Own Your Prep: Deploy Your Personal 7-Day AI Coach

- AI agent vs. chatbot distinction
- Goal + constraint-based planning
- Pre-filling from localStorage profile
- 7-day plan with daily tasks and questions
- Revision checklist generation

Deliverable: 7-day prep plan with collapsible day cards (topic, 3–5 questions, 1 mock task per day) + revision checklist

Session 8

Ship It: Polish, Test, and Nail the Demo

- Loading spinners on all AI calls
- Error messages for failed calls
- Input validation across all forms
- Project README with AI
- Manual test checklist + 2-min demo script

Deliverable: Fully polished, error-handled, portfolio-ready AI Interview Prep Copilot with README, test checklist, and rehearsed demo

Quick-Reference Summary Table

#	Session Title	Key Topics	Deliverable
1	Launch HQ: Build Your AI Interview War Room	localStorage persistence · Form-based data entry · Profile form with 6 fields...	Working web app with profile form, save/load from localStorage, and layout for all 7 upcoming AI features
2	Decode Any JD: Make AI Read Jobs for You	Structured prompt engineering · JSON output parsing · App state management...	JD Analyzer section: text area → Analyze button → structured result cards (Required Skills, Responsibilities, Difficulty, Top Interview Topics)
3	Know Your Gap: AI-Powered Profile vs. JD Battle Report	Multi-context prompting · Reading from localStorage + app state · Explainable AI output...	Match Report section: matched skills, missing skills, improvement suggestions, and interview risk areas
4	Arm Yourself: Generate 12 Targeted Interview Questions	Prompt chaining · Multi-source context building · Categorised question generation (Technical, HR, Project, Scenario)...	12 interview questions across 4 collapsible categories with copy and regenerate controls
5	Practice Under Fire: Get Your Answers Scored by AI	Rubric-based AI evaluation · Dropdown from Session 4 output · Score out of 10...	Evaluator feature: question dropdown, answer text area, AI feedback card with score, strengths, gaps, improved answer
6	Never Get Stuck: Build a RAG-Powered Doubt Crusher	Retrieval-Augmented Generation concept · In-app knowledge base as JS array · Keyword-based retrieval...	Doubt Solver section: question input → AI answer grounded in retrieved knowledge note → source note title displayed
7	Own Your Prep: Deploy Your Personal 7-Day AI Coach	AI agent vs. chatbot distinction · Goal + constraint-based planning · Pre-filling from localStorage profile...	7-day prep plan with collapsible day cards (topic, 3–5 questions, 1 mock task per day) + revision checklist
8	Ship It: Polish, Test, and Nail the Demo	Loading spinners on all AI calls · Error messages for failed calls · Input validation across all forms...	Fully polished, error-handled, portfolio-ready AI Interview Prep Copilot with README, test checklist, and rehearsed demo

New Age Software Engineering Program · Interview Preparation Phase (IRP-NASE) · 8 Sessions × 2 Hours · All content generated for instructional use.
